

Civilization Leap Theory System

Companion Illustration Notes for the Three Maps

V2.0 Real World Main Narrative and Engineering Coordination Edition

Public entry / Nine dimensions / Question-led further reading / Institutional engineering / Complete city-scale validation / Civilizational perpetuity and an interstellar future

Document purpose

This document is the design and textual master for the three system maps. It serves the website, publication, research exchange, manuscript endings, presentations and later visual reconstruction. It is not the sole navigator for the entire project, nor does it replace any theoretical master manuscript, institutional proposal or experimental document. Project position, current version and status follow the Civilization Leap Project Master Index V1.3. Editing, public-facing boundaries and AI coordination follow the Unified Editorial Guidelines V4.1.

Author: Zijun Fu | Produced by: Civilization Leap Research Group

Version: V2.0 | Date: 29 July 2026 | Status: master manuscript for reconstruction of the three maps and external presentation

Official website: www.civitas.top | Email: zijunfu@civitas.top

V2.0 revision notes

V2.0 is not a local supplement to V1.5. It is a structural reconstruction based on the current project baseline. V1.5 emerged during the rapid early expansion of the manuscript matrix and effectively performed the task of putting more manuscripts into one map. But as project governance, the public narrative, Spark and Nebula, national-level experiments and the interstellar main chain have progressively been fixed, the original three maps can no longer serve as the current public entry.

Reconstruction item	Main issue in V1.5	Treatment in V2.0
Narrative entry	Primordial meaning, cosmology and the eve of immortality occupied the public center, putting metaphysics first	Real-world questions first, civilizational explanation in the middle, deeper theory afterward as an optional interface
System structure	The sixteen-level asset classification, nine dimensions, product lists and city proposals were mixed into the same theoretical level	Distinguish public entry, system panorama and further-reading navigation; asset coding must no longer masquerade as theoretical structure
Core causality	Many manuscripts and modules, but the main causal chain was insufficiently prominent	Fix the main chain: AGI amplifies the old logic -> interlocking risks -> change in operating logic -> institutional engineering -> complete validation
Boundaries of subjecthood	Expressions such as personal digital lifeform could readily be understood as independent subjects	Real human beings are the subjects; AI avatars and physical intelligent agents are only extensions that may be authorized
Experimental route	City proposals, product prototypes and the status of real-world validation were mixed together	Use national authorization, a complete city-scale system of social operation, and reduced scope without reduced dimensionality as the validation baseline
Long-term future	Deep space was largely described as technology, bases or an abstract vision	What enters interstellar space is not tools but living beings in their entirety and civilization; the universe is home
Version governance	Old names, old versions and the initial matrix stood alongside the current baseline	Specialized maps link back to the Master Index; unify versions, names and public-facing boundaries

Core principle of this edition

The three maps must first let readers see the real-world threshold, the causal account of civilization and a testable route. Readers then decide whether to pursue deeper reading in meaning theory and cosmology. Placing deeper theory later does not weaken it; it returns different questions to their proper levels.

I The shared responsibilities of the three maps

These are not three posters repeating the same content. They perform three consecutive actions: the first lets people see the problem and direction, the second lets them see the whole structure, and the third shows them where to continue.

Map	Sole responsibility	Main questions answered	What it does not do
Map One: Public Entry Map	See	Why must civilization leap be discussed now? What does it change? How does it enter reality?	It does not explain the entire theory at once or seek impact by putting metaphysics first
Map Two: Nine Dimensions Panorama	See the whole	How do reality, civilization, subjects, institutions, engineering, validation and the long-term future form a whole?	It is not a manuscript asset list and does not claim that every mechanism has been validated
Map Three: Further Reading Map	Continue	Starting from their own questions, what should different readers read first, what judgment should they form, and which mechanism should they enter?	It does not replace causal navigation with a pile of filenames or expose internal governance entry points

Together the three maps form a visual entry of seeing, seeing the whole and continuing. They must share the same main causal chain, ordering of goals, boundaries of subjecthood and version baseline.

II A shared narrative order for public maps

Order	What the map should show	Core judgment
1. Real-world questions	AGI changes the conditions of capability, decision-making, organization, warfare and cognition	AGI is not an ordinary tool; it amplifies the structure of civilization
2. Civilizational judgment	The old logic of strategic interaction creates interlocking risks when capabilities are amplified	Once risks begin to threaten continued existence as a whole, local optimization is no longer enough
3. Change in operating logic	Move from the underlying logic of self-interest toward others first	Concern for others is not a moral add-on but a higher-level structure of long-term self-interest
4. Institutions and engineering	Resource Pool, Contribution Value, separation of three powers, AGI-COS, Common Window, Spark and Nebula	Theory must enter structures that can operate, be audited and be rolled back
5. Real-world validation	National authorization, a complete city-scale system of social operation, reduced scope without reduced dimensionality	Civilization leap cannot be proved by an isolated product or a partial project
6. Goals and long-term future	Freedom from insecurity over basic survival, happiness in life and more meaningful lives; civilizational perpetuity and an interstellar future	Continued existence comes first; the first goal is not the ultimate goal
7. Optional deeper reading	The Human Heart, Meaning Dynamics, Emergent Meaning Cosmology and deeper research	Deeper theory provides explanation, rather than a prerequisite for the validity of practical proposals

III Map One Public Entry to the Civilization Leap Theory System

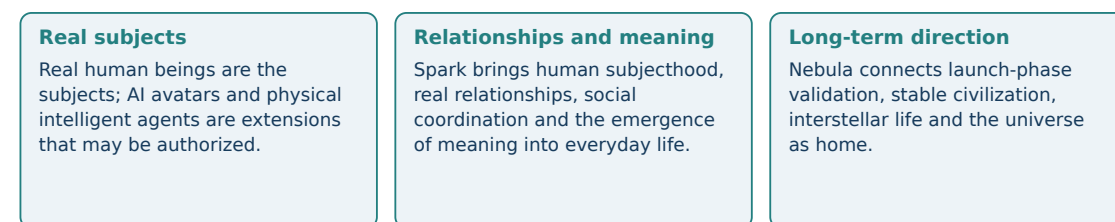

Map One has one task: within a minute, let first-time readers see why the leap is necessary, how it happens, how it is validated and what it is ultimately for. It begins neither with cosmology nor with a manuscript list.

Map One | Public Entry to the Civilization Leap Theory System

From shared reality to civilizational judgment, operating structure and a testable route

AGI is not a tool outside civilization but an amplifier of civilization's structure. When the old logic is amplified to endanger continued existence as a whole, civilization leap turns from a choice into a real-world task that must be confronted.

Optional deeper reading: The Human Heart | Meaning Dynamics | Emergent Meaning Cosmology and related deeper theory

Boundary: deeper theory provides explanation; it is not a prerequisite for the validity of public institutional proposals, engineering or real-world judgments.

Map One V2.0 design master: real-world threshold -> civilizational judgment -> operating structure -> validation route -> goals and horizon

1 Central statement on the map

Suggested wording

AGI is not a tool outside civilization but an amplifier of civilization's structure. When the old logic is amplified to the point of endangering continued existence as a whole, civilization leap turns from a choice into a real-world task that must be confronted.

2 Wording for the five-part main chain

Block	Short map wording	Expanded explanation
Real-world threshold	AGI amplifies capabilities and the old logic alike	Increasing capability does not automatically bring civilizational maturity. The more powerful the technology, the more competition, loss of control and fractures of responsibility in the old structure may also be amplified.

Block	Short map wording	Expanded explanation
Civilizational judgment	Risks interlock; local repairs are insufficient	When military, technological, biological, resource, governance and narrative risks become one another's causes and effects, civilization must adopt a global perspective, systemic observation and structural reasoning.
Operating structure	Move from the logic of self-interest toward others first	New structures for resources, contributions, power, responsibility, subjects, relationships and intelligence safety must carry the change in civilization's operating logic.
Validation route	National authorization and complete city-scale validation	Rather than assembling several projects into a pilot, test goals, mechanisms, conflicts, failure boundaries and corrective capacity within a complete system of social operation.
Goals and horizon	Continued existence first, but not continued existence alone	With freedom from insecurity over basic survival, happiness in life and more meaningful lives as the three goals, move toward civilizational perpetuity and the entry of living beings in their entirety and civilization into interstellar space.

3 Boundaries of subjecthood that Map One must preserve

Subject or system	Public-facing role	Prohibited misrepresentations
Human beings	Real subjects, final judges and bearers of responsibility	Must not be described as system resources, data nodes or replaceable components

Subject or system	Public-facing role	Prohibited misrepresentations
Spark	An amplifier of human meaning in the AGI era, supporting real relationships, authorized extensions, social coordination and the emergence of meaning	Must not be presented as an emotional illusion replacing real relationships, or publicly pushed toward an end state of digital life without human subjects
AI avatars and physical intelligent agents	Extensions that real subjects may authorize; identity must be clear, and actions auditable, stoppable and accountable	Must not impersonate humans or automatically acquire subject rights or final decision-making authority
Nebula	A framework supporting civilization leap's entry into reality, city-scale validation, life in a stable phase and the interstellar panorama	The launch edition must not masquerade as the end state; the panoramic edition must not masquerade as current capability

4 Requirements for visual execution

Element	Requirement
Visual character	Modern, credible, open and civilizational in scale; avoid cosmic mysticism or excessive science-fiction decoration as the first impression.
Information density	All five main blocks must be readable at a glance, with no more than four lines per block. Use keywords for institutional mechanisms; do not pile version numbers into the main map.

Element	Requirement
Graphic relationships	Use one-way arrows for the main chain. Use feedback lines from validation results to recalibrate the operating structure, rather than depicting theory as a closed system that cannot be corrected.
Deeper-reading interface	Place it at the bottom or side, with less visual weight than the real-world main chain. State clearly that it is not a prerequisite for the validity of practical proposals.
Text production	Do not rely on AI image generation to produce Chinese text directly. Rebuild all wording as editable vector or typeset text so that terminology remains accurate.

IV Map Two Nine Dimensions Panorama of the Civilization Leap Theory System

The nine dimensions are not nine categories of files, nor a nine-level tower descending one way from metaphysics into reality. They are nine perspectives spanning real-world questions, civilizational judgment, subjects and relationships, institutional engineering, validation feedback and the long-term future. Together they explain why civilization leap is a complete undertaking.

Map Two | Nine Dimensions of the Civilization Leap Theory System

A complete structure spanning reality, civilization, institutions, engineering, validation and the long-term future

I | See reality clearly

1 Threshold of the AGI era

The conditions of capability, decision-making, warfare, organization and cognition are rewritten.

2 Old logic and interlocking risks

Local competitions amplify each other; risks spread across domains and threaten continued existence as a whole.

3 Civilizational goals and ordering of values

Continued existence first; toward freedom from insecurity over basic survival, happiness in life and more meaningful lives.

II | Form a new operating structure

4 Real subjects, relationships and meaning

Real human beings are the subjects; Spark supports authorization, relationships, coordination and the emergence of meaning.

5 Pre-Institutional Language and governance structure

Organize new realities with new concepts, boundaries, responsibilities and separation of three powers.

6 Resource Pool, Contribution Value and coordination

Distinguish ownership from use; bring actual resource release and public value into the operating structure.

III | Enter validation and the long-term future

7 AGI safety and engineering protocols

AGI-COS, Common Window, audit, rollback, circuit breakers and humanity's final decision-making authority.

8 National-level complete city-scale validation

National authorization, city-scale implementation and reduced scope without reduced dimensionality; generate counterexamples and corrections.

9 Civilizational perpetuity and the universe as home

Whole living beings and civilization enter interstellar space; the process sustains life, happiness and the continuous generation of meaning.

Main causal chain: AGI amplifies the old logic -> interlocking risks threaten continued existence -> change in civilization's operating logic -> institutional and engineering implementation -> complete city-scale validation -> happiness, meaning, perpetuity and an interstellar future

Map Two V2.0 design master: nine dimensions arranged in three horizontal bands

1 Formal definitions of the nine dimensions

Dimension	Core question	Representative content	Boundary
1. Threshold of the AGI era	What has changed in the conditions of civilization?	The conditions of capability, decision-making, warfare, organization, cognition and social coordination are rewritten	Do not present predictions as facts that have already occurred
2. Old logic and interlocking risks	Why are old structures difficult to sustain?	Old strategic-interaction logic, fractures of responsibility, cross-domain risk transmission and threats to continued existence as a whole	Do not use one case to prove universal necessity
3. Civilizational goals and ordering of values	Why should civilization change, and for what?	Continued existence first; freedom from insecurity over basic survival, happiness in life and more meaningful lives	Do not mistake the first goal for the ultimate goal
4. Real subjects, relationships and meaning	How does a new civilization enter a person's life?	Subjecthood, real relationships, Spark, shared life, and the generation and continuation of meaning	Do not publicly elaborate an end state of intelligent life without human subjects
5. Pre-Institutional Language and governance structure	Why can old language no longer organize new realities?	Pre-Institutional Language, separation of three powers, authorization, responsibility and transitions between private and public domains	Do not substitute terminology for operating mechanisms
6. Resource Pool, Contribution Value and coordination	How are resources and contributions reorganized?	Separation of ownership and use, actual release of resources, contribution records, resource allocation and public value	Contribution Value must neither become a rating of persons nor a tradable asset
7. AGI safety and engineering protocols	How can powerful intelligence enter civilization under constraints?	AGI-COS, Common Window, audit, rollback, circuit breakers and humanity's final decision-making authority	Engineering protocols do not replace civilizational goals
8. National-level complete city-scale validation	How can the system be proved or falsified?	National authorization, city-scale implementation, reduced scope without reduced dimensionality, records of counterexamples and corrections	Partial operation cannot replace whole-system validation
9. Civilizational perpetuity and the universe as home	Where is civilization heading in the long term?	Stable openness, civilizational memory, interstellar life, cosmic citizenship and the universe as home	Long-term research must not be projected backward into current conclusions

2 Three system chains that must not be confused

Chain	Formal expression	Position in the maps	Function
Internal theoretical explanation chain	Cosmological level -> meaning level -> civilization level	Outside the center of the main public map; an optional deeper-reading interface only	Explain the relationship between meaning, subjects and existence
Practical realization chain	Civilization level -> institutional level -> engineering level -> product level -> experimental level	Middle and lower parts of Map Two	Turn civilizational judgment into operable, testable structures
Audience presentation chain	Real-world questions -> civilizational explanation -> specific mechanisms -> validation results -> further-reading entry	Shared by all three maps	Let different audiences enter the same theoretical whole through shared questions

Structural judgment

The nine dimensions show what must be seen in a complete civilizational undertaking. The Master Index records what the current project specifically contains, where it is and its status. Specialized panoramic maps must not compete with the Master Index for the role of sole navigator.

3 How Map Two relates to the five-volume work

Five-volume work	Main questions answered	Position in the nine-dimensional map
The Civilization of Being Needed	Why has civilization reached a new threshold? What is being amplified by technology and the old logic?	Dimensions 1-3
Pre-Institutional Language	Why can old language not organize new realities? What pre-institutional language do new institutions need?	Dimensions 4-5
Civilization Leap White Paper	How does civilization leap form institutional, resource, governance and engineering structures?	Dimensions 5-8
Civilizational Perpetuity	How can civilization after the leap remain open and calibrated over the long term, avoiding self-destruction and rigidity?	Dimensions 8-9
Meaning Symbiosis	How does civilization continuously generate meaning through real subjects, relationships and shared life?	Dimensions 4 and 9, and throughout the map

V Map Three Further Reading Navigation for the Civilization Leap Theory System

Map Three is not a contents list. A contents list starts with files; further-reading navigation must start with people's questions. Every route should explain the question the reader faces, why its first text is the entry point, what judgment the next text adds, and which mechanism or level of research it ultimately reaches.

Map Three | Further Reading in the Civilization Leap Theory System

Start from readers' questions, not from an accumulation of files

What do you most want to understand now?

Use principle: every route must explain which question it answers, which judgment it forms, which mechanism it enters and what to read next.

Internal coordination: Master Index -> Unified Editorial Guidelines V4.1 -> current task master manuscript; this entry does not appear on public maps.

Map Three V2.0 design master: eight question-led further-reading routes

1 Eight public further-reading routes

Route	Reader's question	Suggested chain	Destination
Quick understanding	What, exactly, is civilization leap trying to answer?	Ten Questions on Civilization Leap -> five-volume overview -> The Civilization of Being Needed	Shared questions and a judgment about our era
Risk and safety	Why does AGI turn local risks into risks to the whole?	The Only Path -> research on the formation of blocs in AI governance -> AGI-COS and minimum guardrails	Strategic assessment and governance constraints
Civilization theory	Why must civilization change, and how?	Read the five-volume work in its formal volume order	A full causal and structural understanding of civilization
A person's life and meaning	How does a new civilization genuinely enter everyday life?	The two volumes of Meaning Emergence -> Spark's real-world main-narrative series	Subjects, relationships, authorization, happiness and the emergence of meaning
Institutions and engineering	How does civilizational judgment become an operable structure?	Resource Pool -> Contribution Value -> separation of three powers -> Common Window Protocol	Institutional interfaces, boundaries of responsibility and engineering constraints
Experiment and implementation	How can civilization leap be validated rather than merely discussed as a vision?	National-level comprehensive experimental zone -> Nebula Launch Edition -> audit / rollback / circuit breakers / correction	Complete city-scale system validation

Route	Reader's question	Suggested chain	Destination
Long-term and interstellar	How can a stable civilization enter interstellar space and continue living?	Nebula Panoramic Edition -> interstellar applications program -> The Universe Is Home -> From National Citizen to Cosmic Citizen	Civilizational perpetuity, interstellar life and the universe as home
Deeper theory optional	Why can meaning, subjects and existence be explained within a unified account?	The Human Heart -> Meaning Dynamics -> Emergent Meaning Cosmology and deeper-research interfaces	The internal theoretical explanation chain or the external deeper-reading track

2 Writing further-reading navigation causally

Inadequate wording	Adequate wording
Other related manuscripts include A, B, C and D.	A identifies the real-world question; B explains its structural causes; C proposes operating mechanisms; D moves into validation and correction.

Inadequate wording	Adequate wording
We recommend continuing with the Civilization Leap series.	If you want to understand why the old logic of strategic interaction fails in the AGI era, continue with The Only Path. If you want to understand how a new civilization operates, enter the five-volume work and institutional engineering.
Readers interested in deep space can read manuscripts about the universe.	If you want to understand how living beings in their entirety and civilization can enter interstellar space together, start with Nebula Panoramic Edition, then move to the interstellar applications program and research on cosmic citizenship.

3 Internal coordination entry points must not appear on public maps

Internal handover order

Master Index V1.3 -> Unified Editorial Guidelines V4.1 -> current task master manuscript -> relevant version maps -> non-negotiable boundaries and authorization for this task. This order serves research, editing, translation, typesetting and AI coordination. It is not displayed as a public further-reading route.

VI The correct relationship between the three maps and the manuscript matrix

V1.5 placed the sixteen-level manuscript matrix directly within the system panorama. V2.0 must separate two structures. The theoretical and engineering structure answers how the parts are causally connected. The asset-classification structure answers how files are coded, archived, published and maintained. Both matter, but neither can replace the other.

Structure	Question addressed	Current rule of use
Three-map system structure	How readers see the problem, see the whole structure and continue reading	For the public, publication, research exchange and the website; enter through real-world questions
Master Index manuscript matrix	What sections the project contains and how its current baseline and responsibilities are allocated	The sole internal project navigator; all specialized maps link back to it
Sixteen-level asset-coding matrix	How files are classified, numbered, archived and mapped to the website and downloads	Continue checking it as an asset-management tool; it must not masquerade as the current theoretical hierarchy
Old A/B/C/D hierarchy in the Management Manual	Early folder and type management	Historical and migration reference only; where it conflicts with current coding, the current baseline prevails

Proposed public manuscript matrix

Public section	Question answered	Main works
Quick entry	Why does this matter to me, society and civilization?	Ten Questions on Civilization Leap, First Reading Edition and Public Entry Map

Public section	Question answered	Main works
Civilization core	Why leap, what changes, and what is the overall structure?	The five-volume Civilization Leap work
Strategic security	How does the old logic create interlocking risks, and how can minimum guardrails be established?	The Only Path, research on governance bloc formation, AGI-COS
Subjects and meaning	How does a new civilization enter real relationships, shared life and a person's life as a whole?	The two volumes of Meaning Emergence and Spark's real-world main-narrative series
Institutional engineering	How do resources, contributions, power, responsibility and intelligence enter an operating structure?	Resource Pool, Contribution Value, separation of three powers, Common Window Protocol
Experimental validation	How can a complete social system test the theory and mechanisms?	National-level comprehensive experimental zone, Nebula Launch Edition
Long-term future	How can civilization endure, and how can living beings in their entirety and civilization enter interstellar space?	Nebula Panoramic Edition, interstellar applications program, The Universe Is Home, cosmic citizenship
Deeper theory optional	A deeper unified explanation of meaning, subjects and existence	The Human Heart, Meaning Dynamics, Emergent Meaning Cosmology and research interfaces

VII Different audiences and uses

Audience or use	Preferred maps	Entry language	Must avoid
Public and website homepage	Map One	Real-world change, people and life, risks and goals	Putting metaphysics, version genealogy or internal rules on the first screen
Publishers and books of ideas	Maps One and Three	Questions of our era, intellectual judgments and reading continuity	Turning the map into a product-feature list or policy flowchart
Civilization research institutions and academic exchange	Map Two and the research map	Question chains, levels, evidence status and interfaces open to criticism	Sweeping generalizations about established disciplines or speculation as empirical conclusions
Decision-makers and think tanks	Simplified Map One and the real-world parts of Map Two	Interlocking risks, national interests, minimum guardrails and validation routes	A lecturing tone or making metaphysics a prerequisite for policy validity
Institutional and engineering teams	Map Two and specialized architecture diagrams	Interfaces, responsibility, audit, rollback, circuit breakers and validation conditions	Replacing civilization as a whole with local components
Manuscript endings and library pages	Map Three	Move from the current question to the next text	Using titles that have been retired, have not been established or cannot be found

Audience or use	Preferred maps	Entry language	Must avoid
Long-term future and interstellar topics	Dimension Nine of Map Two and the long-term route of Map Three	Living beings in their entirety and civilization entering interstellar space; the universe is home	Presenting future research as current capability or established institutions

VIII Visual design and typesetting standards

Item	Shared standard
Overall style	Clear, modern, credible and civilizational in scale. Let structural strength replace accumulated decoration.
Color hierarchy	Dark blue for reality and safety; teal for subjects and coordination; restrained gold for goals and the long-term future; low-saturation gray-gold for deeper-reading interfaces.
Typeface	Use formal Chinese fonts that are editable and embeddable; keep titles, body text and numbers in one font family. Text embedded in AI-generated images must not be used directly in formal maps.
Information hierarchy	Each map has only one visual center. The main chain has the largest type, mechanisms come next, and boundaries and deeper-reading interfaces have the smallest type.
Arrow semantics	Solid arrows indicate causal progression; feedback lines indicate recalibration through validation; dashed lines indicate optional deeper reading or long-term research, not completed realization.
Evidence status	Use distinct badges or legends for facts, structural reasoning, institutional prototypes, engineering proposals and long-term research. Avoid equal visual emphasis creating the illusion that everything has been proved.

Item	Shared standard
Version information	Formal maps state their name, version and date. Keep website and download filenames stable. Archive old maps rather than overwriting historical files.
Accessibility	Ensure text contrast, type size and reading order. In addition to color, use numbers, line styles or labels to distinguish information.

IX Shared terminology and prohibited substitutions

Required wording	No longer the current main formulation	Explanation
Five-volume Civilization Leap work	Civilization Leap trilogy	List the formal titles of all five volumes at first mention

Required wording	No longer the current main formulation	Explanation
Common Window Protocol — current Chinese wording: “公共窗口协议”	Common Window Protocol — historical Chinese wording: “共同窗口协议” (literally, shared/common window protocol), except in historical filenames	Follow the current project name
Real human beings are the subjects; AI avatars and physical intelligent agents are extensions that may be authorized	Personal digital lifeforms as independent subjects	The public main narrative does not enter an end state of intelligent life without human subjects
National authorization, city-scale implementation, reduced scope without reduced dimensionality	Validating civilization leap by stitching together several small projects	Validation must preserve the complete structure of social operation
Freedom from insecurity over basic survival, happiness in life and more meaningful lives	Emphasizing only continued existence or only meaning	Continued existence comes first, but it is not the ultimate goal
Living beings in their entirety and civilization entering interstellar space	Humans extending outward with tools	Tools provide the means; what enters interstellar space is life, relationships, culture, institutions, memory and civilization
The universe is home; Earth is our place of origin, first home and root of life	Leaving Earth and abandoning our terrestrial home	Making the universe home is an expansion, not a negation of Earth
Metaphysics remains internal; externally, reduce its prominence, place it later and translate it into accessible terms	Deleting or denying the metaphysical foundation	Public-facing boundaries must be kept separate from judgments about theoretical truth

X Preservation and migration of V1.5 content

V1.5 content	V2.0 treatment	Destination or reason
The three maps' basic division: see, see the whole, continue	Retain and strengthen	Still the core value of the three maps
Sixteen-level manuscript matrix	No longer at the center of the public panorama	Retain as an asset-classification and migration-checking tool
Twelve further-reading routes	Reorganize into eight question-led routes	Merge duplicated directions and restore causal continuity
Products and prototypes such as Meaning Ledger, Beacon, Guardian and Dream Garden	Remove from the main maps	They do not serve as the general entry in the current Master Index main baseline; check them in specialized or historical asset registers

V1.5 content	V2.0 treatment	Destination or reason
City proposals for Hong Kong, Singapore, Dubai and elsewhere	Remove from the real-world validation main chain	A proposal for a specific place does not mean national-level complete city-scale validation has been established

V1.5 content	V2.0 treatment	Destination or reason
AGI-COS, multiple protocol versions, historical and current Chinese names for Common Window, anti-closure	Preserve current core mechanisms; remove the accumulation of version numbers on the maps	Public maps show responsibilities only; the Master Index and version maps maintain version relationships
Long-range content such as Deep-Space Ark, The Universe Is Home and the Overview Effect	Reorganize into the long-term chain: living beings in their entirety and civilization entering interstellar space -> the universe is home	Place long-term research later; do not project it backward into current capabilities
The main chain centered publicly on primordial meaning	Move into the optional deeper-reading interface	Preserve deeper theory in full, without making it a prerequisite for the validity of the public main narrative
The eve of immortality technology as the overall entry to the era	No longer the public axis of the three maps	Current public entry centers on AGI conditions, civilizational risks, subjects and relationships, and testable engineering

XI Baseline documents and maintenance rules

Baseline document	Role adopted in this manuscript
Civilization Leap Project Master Index V1.3	Establish current project position, five-volume naming, the Spark-Nebula baseline, national-level experiments, the universe as home and the interstellar main chain. All specialized maps link back to this index.
Unified Editorial Guidelines V4.1	Establish reality before metaphysics, three levels of public-facing boundaries, preservation of subjecthood and causality, causal relationships in the manuscript matrix, complete delivery and version governance.
Research Map of the Civilization Leap Theory System V1.0	Provide a structure for institutional exchange through question chains, research axes, manuscript interfaces and evidence status.
Navigation Notes for the Civilization Leap Theory System Reading Map V1.2	Preserve experience with seeing and continuing to read, but recalibrate its metaphysics-first sequence, old names and deep-space language against V4.1 and the Master Index.
Master Manuscript Matrix V1.0 and Classification Coding and Version Standards V1.0	Early foundations of asset-based management. Check versions, names, public status and levels one by one; do not directly use them as the current public theoretical panorama.
Civilization Leap Theory System Management Manual Final Version	Reference for the early A/B/C/D hierarchy and folder management; not the priority baseline where it conflicts with current project governance.
Civilization Leap Theory System Mind Map Nine Dimensions	Preserve early system-development history and theoretical content; reconstruct the public nine-dimensional map according to this manuscript and move deeper theory to the optional deeper-reading track.

Maintenance triggers

A new version of this manuscript must be opened, with the Master Index updated in sync, when any of the following occurs: a core master manuscript is upgraded; a formal name, manuscript responsibility or public-facing boundary changes; a national-level experiment reaches a new state; Spark and Nebula undergo structural upgrading; a long-term fixed principle is added; or any calibration affects the main causal chain of the three maps. Local typo or layout repairs in a single manuscript do not automatically trigger a structural version upgrade of the three maps.

Conclusion

The public entry map lets people see. The nine-dimensional panorama lets them see the whole. The further-reading map lets them continue. Together they are not decoration for a huge manuscript library. They turn civilization leap from a complex system that is difficult to enter into a public entry that can be understood, judged, questioned, validated and advanced.

The maps must have force, but that force must not come from mystification. They must offer a distant horizon, but the horizon must not obscure the ground beneath our feet. They must be complete, but completeness does not mean cramming everything into one map. True completeness connects real-world questions, civilizational judgment, institutional engineering, a person's life, validation routes and the long-term future while preserving the boundaries of each.

What enters interstellar space is not tools but living beings in their entirety and civilization. The universe is home; Earth will always be our place of origin, first home and root of life.
