

Spark Manifesto

In the AGI era, let real people continue to face the world as themselves

Author: Zijun Fu | Produced by Civilization Leap Research Group · Spark Project Team

Version: V1.1 Locked Edition | Date: July 2026

Status: Public Mission and Civilizational Invitation

Spark does not replace people. It amplifies them.

Behind every avatar is a person of flesh and blood.

Opening Declaration

In the AGI era, Spark brings AI and people together to amplify people, not replace them. It amplifies human capability and extends human care across time and space, so that one person's goodwill can reach more real people and one person's capability can help more people in need. For family, for loved ones, for friends, for colleagues, for customers, for complete strangers, for everyone! Meaning emerges: everyone for me, and I for everyone!

1 The Stronger Technology Becomes the More Essential It Is to Keep People in the World

AGI can write, diagnose, design, drive, analyze, and execute. It will do more and more of what only humans could once do. The real question, then, is not what people can still do. It is whether, as systems do increasingly more on their behalf, people can still express themselves, choose, love, take responsibility, and create as themselves, while remaining accountable for real-world consequences.

Spark rejects a future that appears efficient while gradually removing people from their own lives. It does not make AI more humanlike so it can replace people. It makes AI a digital extension of people, enabling particular human beings to participate in the world more securely.

2 Care Must Come from Real People

AI can help people remember, translate, organize, receive reminders, and reach others. But it cannot truly love one person on another's behalf. Important apologies, promises, farewells, and choices cannot be performed by generative systems. Spark does not manufacture illusions of intimacy, turn companionship into user retention, or turn relationships into assets.

3 A Person Can Be Extended but Must Not Be Fragmented

One person may simultaneously be a parent, partner, friend, colleague, creator, and participant in public action. Spark allows different identity domains to operate in different settings. It does not allow platforms, devices, and algorithms to split a real subject into competing product personas. Every avatar must lead back to the same center of authorization, the same chain of responsibility, and the same person of flesh and blood.

4 We Uphold Three Red Lines

1. Human beings always retain final judgment.
2. AI identity must never be disguised.
3. Meaning must never be turned into an asset.

Responses are not points, relationships are not leaderboards, and goodwill is not a financial instrument. Spark may begin through commercialization, but it must not become a tool for capital to exploit human hearts, voices, memories, relationships, and digital lives.

5 From One Person to Everyone

When one person's care can reach others, meaning begins to emerge. When one person's capability can help more real people, individuals are no longer wholly confined by time and space. Only when millions of independent subjects coordinate while retaining their boundaries and right to exit can civilization achieve "we are together" without swallowing up "I am myself."

Conclusion

We do not promise a future without conflict, misunderstanding, loss, or pain. We insist only that technology should not remove people from their own lives; that the stronger its capabilities, the clearer its boundaries must be; and that the farther civilization travels, the more essential it is to remember that behind every avatar is a person of flesh and blood.

Every digital life safeguards humanity and enriches meaning.

Reading Guide and Personalized Further Reading

P04-SPARK-005 | V1.1 | Public mission and civilizational invitation

The Role of This Document

Provides the shortest route to answering whether people will be replaced in the AGI era: people remain the subjects, and AI becomes an extension acting under their authorization. Spark enables care, capability, and goodwill to reach more real people.

Current Stage and Boundaries

The manifesto sets out the mission, red lines, and invitation. It does not address the details of systems, technology, commerce, or long-range philosophy. Meaning must not be turned into an asset, relationships must not be ranked, and AI identity must not be disguised.

Theory and concepts come first. Concrete engineering will be developed further once the subjects, resources, jurisdictions, responsibilities, and real-world conditions are clear.
