

From Theory to Reality

Research Interface Summary for a National Comprehensive Experimental Zone for Civilization Leap in the AGI Era

Zijun Fu | Civilization Leap Research Group

V2.0 Final Submission Edition | July 2026

Positioning

This summary is not the full experimental-zone proposal, nor does it request immediate approval for territory-wide institutional replacement. It explains only why Civilization Leap needs validation at the scale of a complete urban social system, what most needs to be decided at the present stage, and which questions a research institute could begin with.

1. Why community or platform pilots alone are insufficient

A community can test goodwill and local collaboration; a platform can test a particular mechanism; and a business can test incentives and organizational efficiency. Civilization Leap, however, concerns the combined relationships among survival guarantees, resource use, contribution recognition, boundaries on power, AGI governance, and structures of meaning. Only a city or region with a real population, rights, resources, conflicts of interest, and conditions for long-term operation can test whether these mechanisms can work together.

2. What is requested now is permission to begin research rather than approval of a plan

The most important decision at the startup stage is whether to allow this proposition to enter national-level research and deliberation: bringing together legal, fiscal, technical, social, ethical, and governance capabilities to conduct systematic scenario analysis, baseline surveys, adversarial review, and limited validation.

3. Six categories of core validation questions

System	Core question	Target
Basic survival guarantees	Can basic survival shift from exclusionary assistance to a baseline allocation made possible by growing civilizational capabilities?	Freedom from survival insecurity
Urban resource pool	Can resources move from prolonged idleness into real use without first changing ownership?	Freedom from survival insecurity and happiness in everyday life
Contribution records and governance credit	Can real contributions become visible without turning into personality scores?	The three meta-goals
Separation of the three powers	Can resources, expertise, and the public's fundamental rights each take their proper place?	Preventing governance from becoming alienated from its purpose
Intelligence for Good and AGI-COS	Can AI strengthen national, urban, and individual capabilities while preserving final human review?	Safety, development, and continuity

System	Core question	Target
Meaning emergence and the human heart	After technological progress, are people less lonely, more able to feel their own value, and more able to reach one another?	A more meaningful life

4. Phase boundaries

- The startup phase uses only rules of voluntary participation, tangible benefits, the ability to exit, and no loss for any participant.
- Territory-wide coordination, forms of property rights, or contribution governance that may be discussed for the stable phase must not become startup-phase obligations.
- Phases are triggered by evidence, social acceptance, governance capability, and risk conditions. They do not advance automatically by calendar year.
- Every experiment must allow stopping and rollback, and must record errors in theory, design, implementation, and phase application.

5. Topics a research institute can begin with

1. The case for a complete urban social system as the scale for validating civilizational theory.
2. Phase discipline and institutional legitimacy: why rules intended for the distant future cannot be applied prematurely.
3. Causal dependencies, conflicts, and the minimum validation combination among the six major systems.
4. How to establish contribution records and public recognition without turning people into scores.
5. How to establish domestic authenticity and international credibility for a civilizational high ground.

The complete Proposal for a National Comprehensive Experimental Zone for Civilization Leap in the AGI Era is a subsequent dedicated document. This package does not present it as though its full text were attached.

Reading Guide and Personalized Further Reading

P06-EXPERIMENT-003 | V2.0 | Current first read for the public document family and short introduction to research entry

What this manuscript covers

A concise explanation of why national-level and city-scale research is needed, with a narrower scope but no reduction in systemic dimensions, and what is actually being requested now.

Real-world effect

T2 research-entry explanation. “Final Submission Edition” means only that the authors have completed the manuscript. It does not establish that it has been submitted, received, endorsed, or made the basis of a collaboration.
