

Nebula Series Revision Notes and Version Map

Changes, review responses, and citation relationships from the V1.0 initial baseline to the V1.1 transition and validation enhancement

The whole is sufficient to safeguard continued existence without engulfing individuals; resources flow efficiently without turning people into instruments of efficiency; life can be happy, interesting, and enjoyable, while new meaning continually emerges and is carried forward.

Version: V1.1

Status: P06-NEBULA-012 | Historical version governance / revision archive | Current version map awaiting reconstruction

Date: July 2026

Contents

- 01 Upgrade conclusion
- 02 Review-response matrix
- 03 Structures added in V1.1
- 04 Revision summary by document
- 05 Current version map
- 06 Higher-level and related manuscripts
- 07 Fixed and open items
- 08 Conditions for subsequent upgrades

1. Upgrade conclusion

V1.0 is archived as the “initial baseline edition,” having defined Nebula's purpose, goals, stages, phases, and six principal mechanisms. V1.1 is upgraded to the “transition and validation enhancement edition.” Without changing the master structure, it supplements real-world entry, subject definitions, system interfaces, capability triggers, city-level validation, and limited formalization.

V1.1 does not demonstrate maturity through more pages, formulas, or citations of scholars. It completes the key chain from “what Nebula should be” to “how it enters reality and becomes open to refutation.”

2. Review-response matrix

Review comment	Response	Explanation
Transition dynamics are missing	Fully accepted	Add Startup and Transition Dynamics and a summary in the General Framework
Insufficient formalization	Partially accepted	Add a tool hierarchy; use precise quantification only for suitable objects; reject total scores for personhood and meaning
The human subjects holding the highest decision-making weight are undefined	Fully accepted	Define subjects at individual, local, professional, national, transnational, and civilizational-baseline levels
AGI capability assumptions are unsupported	Accepted with calibration	Replace these with triggers based on capability, safety, audit, legal, and trust conditions
Insufficient dialogue with existing institutional theories	Accepted through a separate document	Add a research interface without turning the master manuscript into a literature review
The General Framework should expand to 500-800 lines	Mechanical criterion rejected	Add only necessary higher-level content and maintain the division between the General Framework and specialist manuscripts
The Dream Garden manuscript is too short	Substantive issue accepted	Add scarce-resource conflicts, support after failure, culture, and data governance
The burden of the ERP name	Accepted	Retain “intelligent ERP” and add the subtitle “civilization-level resource coordination layer”
Overlap among Happiness Ladder levels	Accepted	Clarify that the eight levels are observational dimensions that may overlap, rather than mutually exclusive categories
Overlap between the meaning specialist manuscript and the two volumes	Accepted	Position it as operating interfaces and operational rules; add a comparison with the two volumes

Review comment	Response	Explanation
Add city pilots	Fully accepted	Add a city-level integrated validation plan
The description of seven phases	Corrected	The formal structure has eight phases

3. Structures added in V1.1

- Additional coordination rather than a transfer of power: Nebula does not become a new central authority.
- Human rights-holding subjects are matched to the scale of the matter; no permanent unified representative center is established.
- AGI autonomy is triggered by capability conditions, with support for upgrading, downgrading, and rollback.
- Explicit interfaces connect the Resource Pool, intelligent ERP, Happiness Ladder, Dream Garden, governance, and meaning.
- City-level integrated validation uses national authorization, a city as the host, a narrower scope without reducing dimensions, and dual-track rollback.
- Formalization tools have three levels: precise, comparative, and directional.
- The research interface makes professional boundaries explicit: do not presume to instruct specialists in their own fields.

4. Revision summary by document

Document	Principal changes
General Framework V1.1	Transition incentives, human subjects, capability triggers, city validation, and an acceptance matrix
Resource Pool V1.1	Bundles of rights, subject incentives, verification definitions, compensation and exit, and tool boundaries
Intelligent ERP V1.1	Civilization-level coordination-layer subtitle, a gradual semantic pathway, system interfaces, and degradation
Happiness Ladder V1.1	Level criteria, overlapping relationships, subjects using indicators, and prohibited uses
Dream Garden V1.1	Scarce-resource rules, support after failure, culture, and protection of minors' data
Human-Machine Governance V1.1	Human subjects at the scale of the matter, information asymmetry, capability triggers, and transnational interfaces
Meaning specialist manuscript V1.1	Repositioned as the operating interface for the two volumes, adding civilizational memory, forgetting, and a comparison table
Startup and Transition Dynamics V1.0	New
City-Level Integrated Validation V1.0	New
Indicator, Calculation, and Simulation Hierarchy V1.0	New
Institutional Theory Research Interface V1.0	New

5. Current version map

Level	Current documents	Status
Higher-level theory	The Emergence of Meaning, Volume I V2.1; Volume II V1.2	Locked theoretical and lived-experience baselines
Nebula General Framework	Nebula General Framework V1.1	Current institutional-engineering master manuscript
Six specialist manuscripts	Resource Pool, intelligent ERP, Happiness Ladder, Dream Garden, Human-Machine Governance, and Meaning V1.1	Current specialist baselines
Transition and validation	Dynamics, city validation, and tool hierarchy V1.0	Newly added; awaiting real-world validation
Research exchange	Institutional Theory Research Interface V1.0	Companion document; does not determine the General Framework in reverse
Previous-version archive	Nebula Series V1.0	Initial baseline edition; no longer the current citation baseline

6. Higher-level and related manuscripts

- The Emergence of Meaning, Volume I: Operating Principles of Future Civilization, locked V2.1 edition.
- The Emergence of Meaning, Volume II: Real Life in Future Civilization, locked V1.2 edition.
- Spark Series Unified Revised Document Package V2.0, serving as the interface for real subjects, Spark, terminals, remote systems, and the formation of Nebula from Sparks.
- Related manuscripts on national-level integrated experimental zones for Civilization Leap, serving as a further institutional entry point for city-level validation.

7. Fixed and open items

Fixed items	Open items
The goal order of survival, happiness, and meaning	Specific provision and service standards for each region
Three stages: startup, transition, and stability	Timing and technical implementation of each stage
Eight phases and contraction of permissions	Parameters for automatic phase recognition and switching
The whole does not own individuals; AGI has no civilizational sovereignty	Specific constitutional arrangements for transnational and future digital subjects
Separation of resource ownership and use	Contracts, taxation, insurance, and industry rules
Happiness is not scored; meaning is not conferred	Aggregate indicators, research methods, and cultural adaptation

8. Conditions for subsequent upgrades

An upgrade to V2.0 should be considered only if real operating data become available at city or complete regional scale; core subject relationships and the stage structure require reconstruction; new capability and risk conditions arise for AGI autonomy; or transnational, digital-subject, or interstellar operations enter a real-world stage permitting institutional discussion. Before then, pilot data, legal adaptation, indicators, and process optimization should be handled through V1.x iterations.

Reading guide and personalized further reading

P06-NEBULA-012 | V1.1 | Revision history and version evidence

What this manuscript covers

Records review responses, structural changes, document-by-document revisions, and the version relationships at the time of the transition from V1.0 to V1.1.

Current stage

Historical version governance. It retains traceability value but no longer serves as the current version map answering “which document should I open today?”

Historical validity

This manuscript preserves the revision history from V1.0 to V1.1; it is not today's complete version map.
